

Purified anti-human CD8a Antibody

Human paraffin-embedded tonsil tissue slices were prepared with a standard protocol of deparaffination and rehydration. Antigen retrieval was done with Tris-Buffered Saline 1X (1.0M, pH7.4) at 95°C for 40 minutes. Tissue was washed with PBS/ 0.05% Tween20 twice for five minutes and blocked with 5% FBS and 0.2% gelatin for 30 minutes. Then, the tissue was stained with 5 µg/ml of purified anti-human CD8a (clone C8/144B) at 4°C overnight. On the next day, the tissue was washed twice with PBS and stained with goat anti-mouse secondary antibody (clone Poly4053) DyLight™ 488 (green) for two hours at room temperature. The nuclei were counter staining with DAPI (blue). The image was captured with a 10X objective.
