HeLa cells were fixed with 2% PFA for ten minutes, permeabilized with 0.5% Triton X-100 for five minutes, and blocked with 5% FBS for 30 minutes. Then the cells were intracellularly stained with 2 µg/mL anti-human EGFR Antibody (clone AY13) followed by Alexa Fluor® 594 (red) conjugated goat anti-mouse IgG in blocking buffer for two hours at room temperature. Nuclei were counterstained with DAPI (blue). The image was captured with a 60X objective.
